RE: PPG Industries, Inc.- Lake Charles Complex
LAD008086506/Agency Interest No. 1255 /PER20090035
Final Approval for Variance from the Classification as a Solid Waste
for Spent Copper Catalyst, Pursuant to LAC 33:V.105.O.1.c and 105.O.2.c

Dear Mr. Manns:

The Waste Permits Division has received your submittal dated October 12, 2009, regarding the request to grant a variance from the classification as a solid waste for spent copper catalyst resulting from operation of the Per-Tri (Perchloroethylene and Trichloroethylene) and the OHC (Oxyhydrochlorination) reactors. When the OHC reactor bed requires service and blow down steam from the Per-Tri reactor, copper catalyst from the reactor bed is collected and disposed as industrial solid waste or hazardous waste following waste characterization. PPG determined that spent catalyst could be returned to the original Per-Tri and OHC reactors with minimal processing. The variance would include the spent catalyst recovered from and reused in both the Per-Tri and OHC reactors.

In the reactor beds, the copper catalyst consists of a matrix of different sized copper catalyst particles. During the reaction, the copper catalyst is worn into smaller particles by motion in the fluidized reactor beds. The reactor beds require the right mixture of catalyst particle sizes for optimal performance. The beds require service to maintain the performance, which is generally when too much fine catalyst has accumulated in the reactor beds. The performance of the reactor is maintained by removal of the fine catalyst by removal of a portion of the copper catalyst and the insertion of virgin catalyst. The removed copper catalyst would be disposed as an industrial solid waste or hazardous waste.

PPG Industries would instead process the removed catalyst by screening out undesirable fines using a catalyst screening system. The recovered material would then be reused in the catalyst reactor beds. Specifically, catalyst from the Per-Tri reactor blowdown and OHC reactor bed dump would be processed through the catalyst screening system. An associated catalyst transfer system would serve to transfer the catalyst from the containers to the screening system through a closed system. The recovered material would then be reused in the catalyst reactor beds.

Mr. Manns
AI1255
Page 2

PPG Industries had submitted comments to the draft termination. The department's response to the comments is documented in the responsiveness summary attached to this letter. After careful review and consideration of your submittal, the Waste Permits Division hereby grants PPG Industries' request for a variance from the classification as a solid waste for the spent copper catalyst recovered from and reused in the Per-Tri and OHC reactors. This variance remains valid as long as the following conditions are met:

- *The management of the spent catalysts shall not: 1) cause a discharge or imminent threat of a discharge into or adjacent to the waters of the state; 2) create and maintain a nuisance; or 3) violate any applicable provisions of the Louisiana Administrative Code and the U.S. and Louisiana Department of Transportation laws and regulation.*
- *All records of how the catalysts are reclaimed and recycled at PPG Industries' facility shall be maintained in an easy to retrieve and easy to copy format.*
- *If at anytime the spent catalysts are sent for disposal prior to final reclamation, the material shall be properly disposed of at a permitted disposal facility in accordance with the Solid or Hazardous Waste Regulations as applicable.*
- *Any spent copper catalyst must be stored in the RCRA permitted container storage areas prior to processing.*
- *Any copper catalyst produced from the recycling process for further reuse must be stored in DOT compatible containers that are maintained in good condition and stored either in dedicated catalyst storage areas in accordance with all applicable Spill Prevention, Control and Counter Measure plans or in the RCRA permitted container storage areas. Storage in a process area shall not exceed one year.*
- *The catalyst processing must occur in the catalyst screening system and the catalyst transfer system described in the October 12, 2009 request.*
- *All permits required for the operation of the catalyst screening system must be approved and in place before the operation of the system can commence.*

This variance is based on the assumption that the information provided to LDEQ by PPG Industries is complete and accurate. PPG Industries shall inform the LDEQ by written notification in a timely manner, of any deviation from or changes to the information in the variance request which would affect PPG Industries' ability to comply with applicable regulatory requirements or variance conditions. This variance may be suspended, modified, revoked, reissued or terminated for cause.

The granting of this variance does not constitute a defense against any past or future non-compliance with state or federal regulations. Additionally, the granting of this variance does not constitute Department approval for any activity or process that may require a permit or a modification to an existing permit.

Mr. Manns

**RESPONSIVENESS SUMMARY
PPG INDUSTRIES, INC., LAKE CHARLES FACILITY**

**VARIANCE FROM THE DEFINITION OF SOLID WASTE FOR A
COPPER CATALYST
EPA IDENTIFICATION LAD008086506
AGENCY INTEREST #1255**

ITEM	1
REFERENCE	PPG Industries Inc., Comments to Grant Site Specific Variance from Classification as a Solid Waste, EPA ID Number LAD 008086506, Agency Interest Number 1255, PER20090035.
COMMENT	<p>PPG does have concern with one of the proposed conditions in the Final Approval for Variance from the Classification as a Solid Waste. The proposed condition currently states as follows:</p> <ul style="list-style-type: none"> • <i>Any spent copper catalyst or processed copper catalyst must be stored in the RCRA permitted container storage areas.</i> <p>PPG requests that this proposed condition be revised and restated as two separate conditions worded as follows:</p> <ul style="list-style-type: none"> • <i>Any used copper catalyst must be stored in the RCRA permitted container storage areas prior to processing.</i> • <i>Any copper catalyst produced from the recycling process for further reuse must be stored in DOT compatible containers that are maintained in good condition and stored either in dedicated catalyst storage areas in accordance with all applicable SPCC plans or in the RCRA permitted containers storage areas. Storage in a process area shall not exceed one year.</i>
LDEQ RESPONSE	<p>LDEQ acknowledges and concurs in part with the comment. The variance would allow PPG to process the “spent” catalyst in accordance with the variance request. There is clearly a distinction between the material prior to processing and after processing. After processing, the material is no longer considered to be a solid waste, and thus, waste storage standards do not apply.</p> <p>However, the Department is still concerned with the impact on human health and the environment of such material. The second proposed condition provides reasonable conditions on the storage of the processed material ensures that the material will not have a negative impact on human health and the environment.</p> <p>PPG requested that the word “used” be used in place of “spent” to describe the copper catalyst. Please refer to Item 2.</p>

RESPONSIVENESS SUMMARY
PPG INDUSTRIES, INC., LAKE CHARLES FACILITY

VARIANCE FROM THE DEFINITION OF SOLID WASTE FOR A
COPPER CATALYST
EPA IDENTIFICATION LAD008086506
AGENCY INTEREST #1255

ACTION

LDEQ will remove the condition, "*Any spent copper catalyst or processed copper catalyst must be stored in the RCRA permitted container storage areas*", from the final variance approval.

LDEQ will add the following two conditions to the final variance approval:

- *Any spent copper catalyst must be stored in the RCRA permitted container storage areas prior to processing.*
- *Any copper catalyst produced from the recycling process for further reuse must be stored in DOT compatible containers that are maintained in good condition and stored either in dedicated catalyst storage areas in accordance with all applicable SPCC plans or in the RCRA permitted containers storage areas. Storage in a process area shall not exceed one year.*

AGENCY INTEREST #1255

ITEM	2
REFERENCE	PPG Industries Inc., Comments to Grant Site Specific Variance from Classification as a Solid Waste, EPA ID Number LAD 008086506, Agency Interest Number 1255, PER20090035.
COMMENT	<p>While supporting the granting of the variance, PPG expressed concerns regarding the identification of the copper catalyst as "spent" in certain situations and the nature of incidental processing in relation to the copper catalyst screening process. The following is PPG comment on this issue:</p> <p><i>PPG also notes that it does not agree that the used catalyst is "spent" prior to screening because such catalyst is still active and suitable for use; however, this characterization by LDEQ does not affect the outcome of this variance decision. PPG also does not believe that the screening process is necessarily "reclamation" but is more in the nature of incidental processing; however, this characterization by LDEQ also does not affect the outcome of this variance decision. PPG retains all rights to contest any determination that the material is spent or that the screening process is reclamation, should those facts be at issue in any other proceeding.</i></p>
LDEQ RESPONSE	LDEQ notes the comment. LDEQ also concurs that issues raised by the comment do not affect the outcome of the decision to grant this specific variance.
ACTION	No action taken.

PUBLIC NOTICE
LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ)
PPG INDUSTRIES--LAKE CHARLES COMPLEX
FINAL DECISION DOCUMENT TO GRANT SITE-SPECIFIC VARIANCE
FROM CLASSIFICATION AS A SOLID WASTE

The LDEQ, Office of Environmental Services, has made the decision to issue the final decision document for a site-specific variance from classification as a solid waste for PPG Industries, Inc., P.O. Box 1000, Lake Charles, Louisiana, 70602 for the Lake Charles Complex. **The facility is located at 1300 PPG Drive, Westlake, Calcasieu Parish.**

Under this site-specific variance permit, PPG Industries will be granted a variance from the classification as a solid waste of spent copper catalyst to allow for the recycling of the spent material. PPG Industries generates used catalyst that when hazardous is characteristic for 1,2-dichloroethane, hexachlorobutadiene, tetrachloroethylene, or trichloroethylene. The material may also be described by the waste codes D028, D033, D039 and D040. Of the copper catalyst disposed of offsite, approximately 20 percent is classified as industrial solid waste and 80 percent is classified as hazardous waste after characterization. Copper catalyst is used in fluidized reactor beds for the production of halogenated carbon compounds. Due to particle size issues, catalyst is eventually removed from the reaction and disposed. However, PPG Industries proposed to recycle the copper catalyst for use in the fluidized reactor beds. To recycle the copper catalyst, a size sieving process will be employed; no combustion or chemical treatment is involved. Thus, under LAC 33:V.105.O.1.b, LDEQ is public noticing the decision to grant a site-specific variance at the PPG Industries, Lake Charles Complex.

The final permitting action and related documents are available for review and copying (all documents copied will be subject to a \$0.25 charge per copied page) at the LDEQ, Public Records Center, Room 127, 602 North 5th Street, Baton Rouge, LA. Viewing hours are from 8:00 a.m. to 4:30 p.m., Monday through Friday (except holidays). **The available information can also be accessed electronically on the Electronic Document Management System (EDMS) on the DEQ public website at www.deq.louisiana.gov.**

An additional copy of this action may be reviewed at the Calcasieu Parish Library, Westlake Branch, 937 Mulberry Street, Westlake, LA 70669-4601 and the Calcasieu Parish Library, Sulphur Regional Branch, 1160 Cypress Street, Sulphur, LA 70663-5111.

In accordance with Louisiana Revised Statutes (La R.S.) 30:2024, the Permittee may file with the secretary a request for a hearing no later than thirty (30) days after the notice of the action is served. Under La. R.S. 30:2050.21, any person aggrieved by a final permit action may appeal to the Nineteenth Judicial District Court within 30 days after the notice of the action has been given.

Previous notices have been published in The Advocate and Lake Charles American Press on February 11, 2010.

Inquiries or requests for additional information regarding this permit action, should be directed to Will F. Steele, LDEQ, Waste Permits Division, P.O. Box 4313, Baton Rouge, LA 70821-4313, phone (225) 219-3050.

Persons wishing to be included on the LDEQ permit public notice mailing list or for other public participation related questions should contact the Public Participation Group in writing at LDEQ, P.O. Box 4313, Baton Rouge, LA 70821-4313, by email at dcqmailrequest@la.gov or contact the LDEQ Customer Service Center at (225) 219-LDEQ (219-5337).

Permit public notices including electronic access to the issued permit and associated information can be viewed at the LDEQ permits public notice webpage at www.deq.louisiana.gov/apps/pubNotice/default.asp and general information related to the public participation in permitting activities can be viewed at www.deq.louisiana.gov/portal/tabid/2198/Default.aspx.

Alternatively, individuals may elect to receive the permit public notices via email by subscribing to the LDEQ permits public notice List Server at www.doa.louisiana.gov/oes/listservpage/ldeq_pn_listserv.htm.

All correspondence should specify AI Number 1255, Permit Number LAD008086506, and Activity Number PER20090035.
